

Product Renewal

Previously OJISAMA Clutch Kit

S2000 Comfort Single Clutch KIT

Our popular product, previously known as the "OJISAMA Clutch," has been reborn with a new name: "Comfort Single Clutch KIT." Many users have praised its smooth and comfortable operation, so we chose a name that reflects its exceptional ease of use. Experience an outstanding level of control that defies expectations for a reinforced clutch.

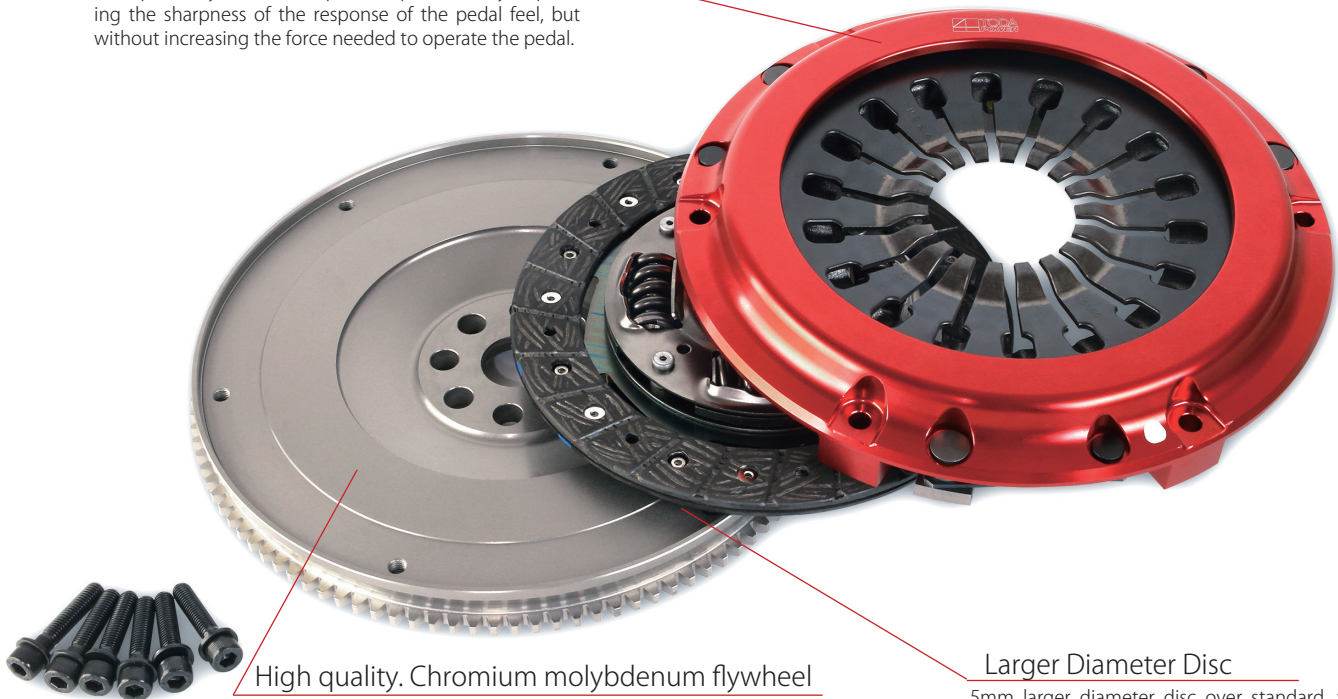

Designed for F20C/F22C engines, this clutch supports up to 350N-m of torque (approx. 350ps), making it compatible with increased displacement and supercharger setups.

Ideal for senior drivers accustomed to automatic transmissions and younger enthusiasts looking for an entry-level performance clutch, this kit is a perfect choice for anyone seeking both comfort and performance.

F20C/F22C

Improvement in clutch response

A strap drive system returns pressure plate forcibly, improving the sharpness of the response of the pedal feel, but without increasing the force needed to operate the pedal.

High quality. Chromium molybdenum flywheel

Stress analysis, balance, and inertia are simulated using CAD solid models for optimized performance. An overall design, designed to give good weight savings and low rotation characteristics. This product has been redesigned with consideration given to making it easier to get away from a standing start.

Larger Diameter Disc

5mm larger diameter disc over standard, with both frictional force and durability improved. Sports orientated friction material used leading to improved bite feel over stock unit. Reducing fatigue whilst traveling over long distances as well as in traffic jams.
